- Absorption: When administered topically or via infiltration, monheim anesthetics are absorbed through mucous membranes, skin, or subcutaneous tissues.
- Distribution: Once absorbed, they distribute locally and systemically, depending on dose and vascularity.
- Metabolism: Most formulations are metabolized primarily in the liver via hepatic enzymes.
- Excretion: Metabolites are eliminated through renal pathways.

Factors Affecting Efficacy

- The type and concentration of the anesthetic agent
- Presence and concentration of vasoconstrictors
- Site of administration and tissue vascularity
- Patient-specific factors such as age, weight, and health status
