QuestionAnswer What is nucleophilic substitution in organic chemistry? Nucleophilic substitution

is a reaction where a nucleophile replaces a leaving group attached to a carbon atom, commonly observed in halogen compounds. It occurs via two main mechanisms: SN1 and SN2, depending on the substrate and reaction conditions. What is the mechanism of Electrophilic Aromatic Substitution (EAS)? In EAS, an electrophile attacks the electron-rich aromatic ring, forming a sigma complex (arenium ion), which then loses a proton to restore aromaticity. This reaction is typical for benzene and its derivatives and includes reactions like nitration, sulfonation, and halogenation. How does Markovnikov's rule apply in organic reactions? Markovnikov's rule states that in the addition of HX to an alkene, the hydrogen atom attaches to the carbon with more hydrogen atoms already attached, while the halide attaches to the carbon with fewer hydrogens. This rule helps predict the major product of such addition reactions. What is the significance of oxidation reactions in organic chemistry? Oxidation reactions involve increasing the oxygen content or decreasing hydrogen content in a molecule. They are important for transforming alcohols into aldehydes or ketones, and further into acids, enabling functional group conversions vital in synthesis processes. Explain the difference between addition and elimination reactions in organic chemistry. Addition reactions involve the addition of atoms or groups to a molecule, increasing its saturation, while elimination reactions involve removing atoms or groups to form double or triple bonds, decreasing saturation and often forming simpler molecules or unsaturated compounds. What are the types of isomerism observed in organic chemistry reactions? Common types include structural isomerism (chain, positional, functional group) and stereoisomerism (geometric and optical). These isomers have the same molecular formula but differ in structure or spatial arrangement, affecting their reactivity and properties.
