Step-by-Step Dissection Process and Common Questions

- External Examination and Identification

Question: What external features should I observe and identify?

Answer:

Begin by examining the frog's external features:

- Head and eyes: Note the position of the eyes, tympanic membranes (eardrums), and mouth.

- Limbs: Observe the length and structure of forelimbs and hindlimbs, noting the webbing in frogs.
- Skin: Check for coloration, texture, and any markings.
- Ventral surface: Look for the cloaca, a common opening for excretory and reproductive systems.

Tip: Sketch the external features and label key structures for reference.

- Opening the Body Cavity

Question: How do I safely open the frog's body cavity?

Answer:

- Use scissors or scalpel to make a shallow incision along the midline from the cloaca to the front of the mouth.
- Carefully cut along the sides to avoid damaging internal organs.
- Use forceps and probes to gently lift the skin and muscles, exposing internal structures.

Common mistake: Cutting too deeply and damaging organs. Proceed slowly and cautiously.

- Identifying Major Internal Structures

Question: What are the key internal organs I should locate?

Answer:

Below are the primary structures to identify, typically in order from the dorsal (back) to ventral (belly) side:

- Digestive System: Esophagus, stomach, small intestine, large intestine, liver, gall bladder, pancreas, and cloaca.
- Respiratory System: Lungs, trachea.
