AFBC Boiler Startup Procedure

The Atmospheric Fluidized Bed Combustion (AFBC) boiler is a type of power generation equipment that offers efficient and environmentally friendly combustion of solid fuels such as coal, biomass, and waste materials. Starting up an AFBC boiler is a critical process that requires meticulous planning, adherence to safety protocols, and precise operational steps to ensure reliable operation, safety, and equipment longevity. Proper startup procedures help in achieving optimal combustion conditions, minimizing emissions, and preventing equipment damage. This article provides a comprehensive guide to the AFBC boiler startup procedure, covering preparatory steps, detailed operational sequences, safety considerations, and troubleshooting tips.

Preparatory Steps Before Startup

1. Pre-Startup Inspection

Before initiating the startup sequence, a thorough inspection of the entire boiler system is mandatory. This includes:

- Checking the integrity of all safety devices, including pressure relief valves, safety shutdown systems, and alarms.
- Inspecting the bed material for proper level and distribution.
- Ensuring the furnace and combustion chamber are free of obstructions, debris, or residual ash.
- Verifying that all valves, vents, and dampers are in their correct positions.
- Examining the fuel supply system for proper operation and adequate fuel supply.
- Inspecting instrumentation, control systems, and sensors for proper calibration and functioning.

2. Fuel and Air System Checks

Ensure that:

- The fuel feed system is operational and free of blockages.
- The air supply system (induced draft fans, secondary air fans) is ready and functioning.
- All dampers are correctly set to their initial positions, typically closed or open as per startup requirements.
- Fuel preparation systems, such as crushers or pulverizers, are functioning properly.

3. System Warm-up and Safety Checks

Prior to startup:

- Perform a warm-up of auxiliary systems like fans, feedwater pumps, and instrumentation.
- Verify emergency shutdown procedures are in place and operational.
- Ensure fire fighting equipment is accessible and ready for use.

Step-by-Step AFBC Boiler Startup Procedure

1. Initiate Cold Start Sequence

The initial phase involves bringing the boiler from a cold state to operational temperature and pressure.

- **Start Auxiliary Systems:** Begin by activating the induced draft (ID) fans to establish proper draft conditions.
- **Preheat the Bed Material:** Use auxiliary burners or start the fluidizing air at low velocity to gradually heat the bed material to the desired temperature, ensuring uniform heating and avoiding thermal shock.
- **Establish Fluidization:** Slowly increase the primary air flow to achieve proper fluidization of the bed material. This is critical for uniform combustion and efficient heat transfer.
- **Check Bed Temperature:** Monitor bed temperature sensors to ensure temperature is rising steadily without hotspots.
- **Supply Fuel:** Introduce fuel gradually into the bed, ensuring even distribution to prevent localized overheating or unburned fuel accumulation.
- **Adjust Airflow:** Fine-tune primary and secondary air flows to achieve stable combustion conditions. Typically, secondary air is introduced after the bed is heated adequately.

2. Achieving Steady-State Operation

Once the initial startup steps are completed:

- **Monitor Combustion Parameters:** Keep an eye on bed temperature, excess air ratio, flue gas composition, and bed pressure.
- **Increase Combustion Intensity:** Gradually increase fuel feed rate while maintaining stable bed temperature and combustion efficiency.
- **Stabilize Flue Gas Emissions:** Ensure emissions are within permissible limits, adjusting air

flow and fuel feed as needed.

- **Activate Electrostatic Precipitators or Bag Filters:** Once combustion is stable, activate particulate removal systems to control dust emissions.
- **Monitor Instrumentation:** Confirm all control systems are functioning correctly and calibrate if necessary.

3. Final Checks and Transition to Normal Operation

Before declaring the boiler ready for continuous operation:

- Verify that all safety interlocks are engaged and operational.
- Confirm that temperature and pressure readings are within normal ranges.
- Ensure that ash removal systems are functioning properly.
- Document all startup parameters and ensure proper log entries are made.

Safety Considerations During Startup

1. Personal Safety

- Ensure all personnel involved are trained and aware of safety protocols.
- Use appropriate personal protective equipment (PPE) such as helmets, gloves, eye protection, and respiratory masks.

2. System Safety

- Never bypass safety interlocks or safety valves.
- Control the rate of fuel addition to prevent sudden pressure surges or bed instability.
- Maintain communication among the startup team to coordinate actions smoothly.

3. Emergency Procedures

- Be prepared to shut down the boiler quickly if abnormal conditions such as excessive temperature, pressure, or abnormal vibrations occur.
- Have fire fighting equipment ready and personnel trained in emergency response.

Troubleshooting Common Startup Issues

1. Bed Instability or Poor Fluidization

- Adjust primary air flow to improve fluidization.
- Ensure bed material is evenly distributed.
- Check for obstructions or blockages in air ducts.

2. Inadequate Combustion or Flame Out

- Increase fuel feed gradually.
- Optimize secondary air flow for better oxidation.
- Check for fuel quality or moisture content issues.

3. Excessive Emissions or Temperature Fluctuations

- Adjust air-to-fuel ratio to improve combustion efficiency.
- Inspect and clean soot blowers, filters, and emission control devices.
- Ensure sensors and control systems are calibrated accurately.
