While other languages like Structured Text and Function Block Diagram are also supported, Ladder Logic remains the standard.

Question 3: In a PLC scan cycle, which process occurs first?

A. Output updating

B. Input processing

C. Program execution

D. Communication with external devices

Correct Answer: B. Input processing

Explanation:

The typical PLC scan cycle begins with reading all inputs, then executing the control program based on those inputs, and finally updating outputs. This sequence ensures that the program always acts on the latest input data, maintaining system integrity.
