Analyzing Key Questions from the 2014 Exemplar

Exam questions in the 2014 exemplar are designed to test both theoretical knowledge and practical application. Below are examples of typical question types and how to approach them.

Data Handling and Graphs

Sample Question:

A pie chart shows the distribution of students' preferred sports. If 30% prefer soccer, 25% prefer basketball, and the remaining prefer other sports, how many students preferred other sports if there are 200 students in total?

Approach:

- Calculate the percentage for other sports: $100\% - (30\% + 25\%) = 45\%$
- Find the number of students: $45\% \text{ of } 200 = 0.45 \times 200 = 90 \text{ students}$

Financial Calculations

Sample Question:

Calculate the total amount payable on a loan of R10,000 at an interest rate of 12% per annum simple interest over 3 years.

Approach:

- Use the simple interest formula:

Interest = Principal $\times$ Rate $\times$ Time

Interest = $10,000 \times 0.12 \times 3 = R3,600$

- Total amount payable = Principal + Interest = $R10,000 + R3,600 = R13,600$

Measurement and Geometry

Sample Question:

Calculate the volume of a cylinder with a radius of 3 meters and height of 5 meters.

Approach:

- Use the volume formula for a cylinder: $V = \pi r^2 h$
- $V = 3.14 \times 3^2 \times 5 = 3.14 \times 9 \times 5 = 3.14 \times 45 = 141.3 \text{ m}^3$

Question:

A small business owner wants to analyze the monthly sales data for their shop over a year. The sales figures (in Rands) are provided in a table. Calculate the mean and median monthly sales, and interpret what these figures suggest about the business's performance.

Analysis:

- The question assesses data handling skills, understanding of average measures, and interpretive ability.
- Learners must sum all monthly sales and divide by 12 for the mean.
- For the median, they need to order the data and identify the middle value.
- The interpretation should connect the statistics to business performance, discussing consistency, variability, or growth.

Sample Response:

Calculating the mean:

- Sum of sales over 12 months = R120,000
- Mean = $R120,000 / 12 = R10,000$

Calculating the median:

- Ordered sales data (example): R8,000, R9,000, R9,500, R10,000, R10,500, R11,000, R11,500, R12,000, R12,500, R13,000, R13,500, R14,000
- Median (middle two values): R10,500 and R11,000
- Median = $(R10,500 + R11,000) / 2 = R10,750$

Interpretation:

The average monthly sales are R10,000, with a median slightly higher at R10,750, indicating a relatively consistent sales pattern with some months performing better than others. The proximity of mean and median suggests stability in sales figures, which is positive for planning and forecasting.
